ENPRO INDUSTRIES COMPANIES

Garlock

Oil seals, bearing isolators and metallic gaskets are just some of the critical products manufactured by the Garlock family of companies to keep people, property and the environment safe. With a culture of continuous improvement and safety, the Garlock family of companies solves some of the toughest engineering, fluid handling and process systems challenges for the worldwide oil and gas, chemical processing, pharmaceutical, nuclear, water/wastewater, chemical processing, and food and beverage industries, as well as many others.

GPT

Pipeline systems rely on specialized service components from GPT to run efficiently and safely. GPT takes on and solves tough engineering challenges for a global clientele of major oil and gas, water/wastewater, energy and chemical processing companies. With inspired design and creative engineering, GPT produces electrical flange isolators, wall penetration seals, protective wraps and other products that enable customers around the world to produce products and services vital to a growing global population.

Technetics GROUP

Technetics Group designs and manufactures engineered solutions for demanding environments. Critical components from Technetics Group are vital to the efficient and safe operation of jet engines, nuclear power facilities, hydrocarbon plants and process equipment, and numerous other environments where sealing integrity is essential. Technetics Group also offers advanced surface and coating technologies, high-performance assemblies and subsystems, and polymer technologies, as well as value-added services.

STEMCO

STEMCO provides the commercial heavy-duty trucking industry with high-performance solutions that improve efficiency, save fuel and help keep the roadways safe. STEMCO is an industry leader in the production of wheel end components, suspension products and braking systems for commercial vehicles. Intelligent transportation systems from STEMCO automatically monitor and inflate tires to help ensure proper tire wear and fuel economy, as well as collect mileage data to reduce maintenance costs and improve fleet profitability.

GGB Bearing Technology is the global leader in high performance plain bearing solutions. Inspired by the engineering challenges of the automotive, aerospace, agricultural, renewable energy and other industries around the world, GGB Bearing Technology delivers a wide-ranging line of metal, metal-polymer, solid polymer, filament wound and bimetallic plain bearings designed to reduce friction, wear and maintenance, while increasing efficiency and safety.

Ships at sea, nuclear power plants, hospitals, pumping stations and municipalities count on medium-speed diesel engines and diesel generator sets from Fairbanks Morse Engine

for reliable marine propulsion, standby emergency power and stationary power. Fairbanks Morse Engine leads the way in dual-fuel engine technology that delivers efficient, reliable power generation.

The international compression industry relies on CPI as a leader in the design and manufacture of high performance compressor components and lubrication systems. In addition to a continuously evolving lineup of compressor valves, packing and wiper rings, piston

and rider rings, packing cases, pistons and rods, emission control systems and monitoring components, the CPI global network also provides compressor operators with unrivaled expertise and support services.

Advancing Technology and Safety From the Inside Out

Critical components designed, engineered and manufactured by EnPro Industries companies are vital to ensuring the efficiency, safety and reliability of thousands of products in more than 40 distinct industries. Components and services offered by EnPro Industries companies touch and improve the lives of millions of people, both directly and indirectly, every day. From aviation to oil and gas production, the world's most vital industries depend on EnPro Industries companies to make the difficult possible and the seemingly impossible a reality.
